

ASSIGNMENT – 3

EXPRESS.JS RESTFUL API'S:

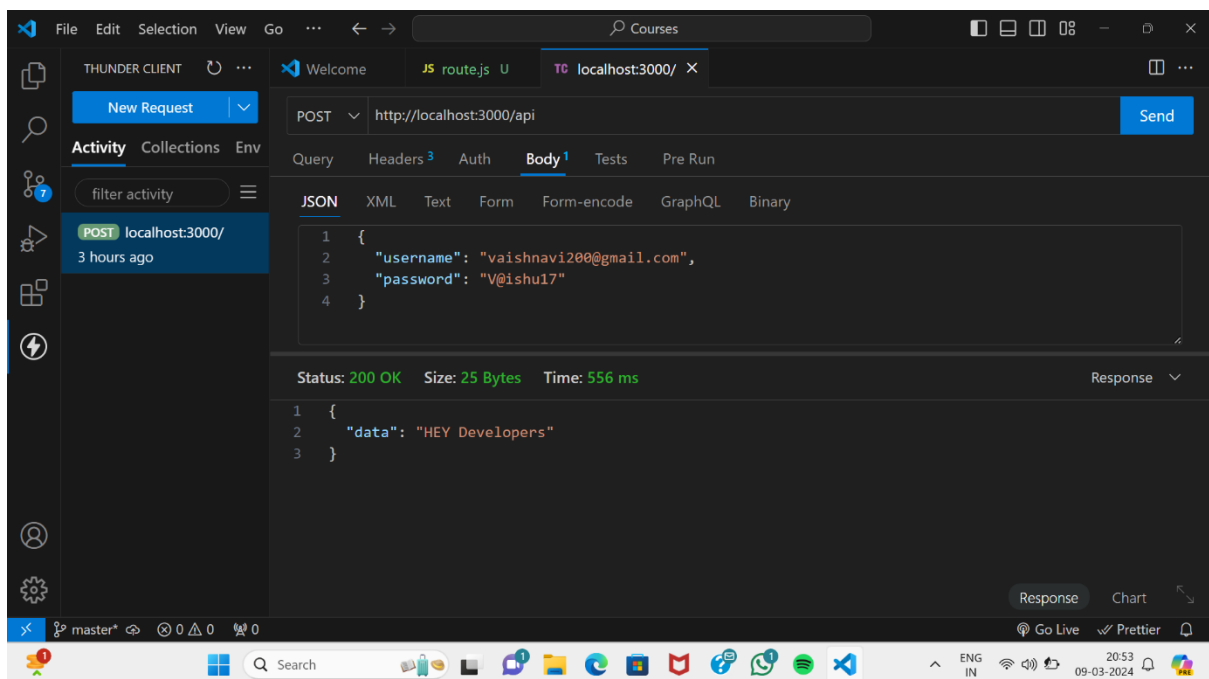

ROUTE.JS

```
import { NextResponse } from "next/server";

export async function POST(request) {
  const data = await request.json();
  console.log(data);
  return NextResponse.json({
    data: "HEY Developers",
  });
}
```

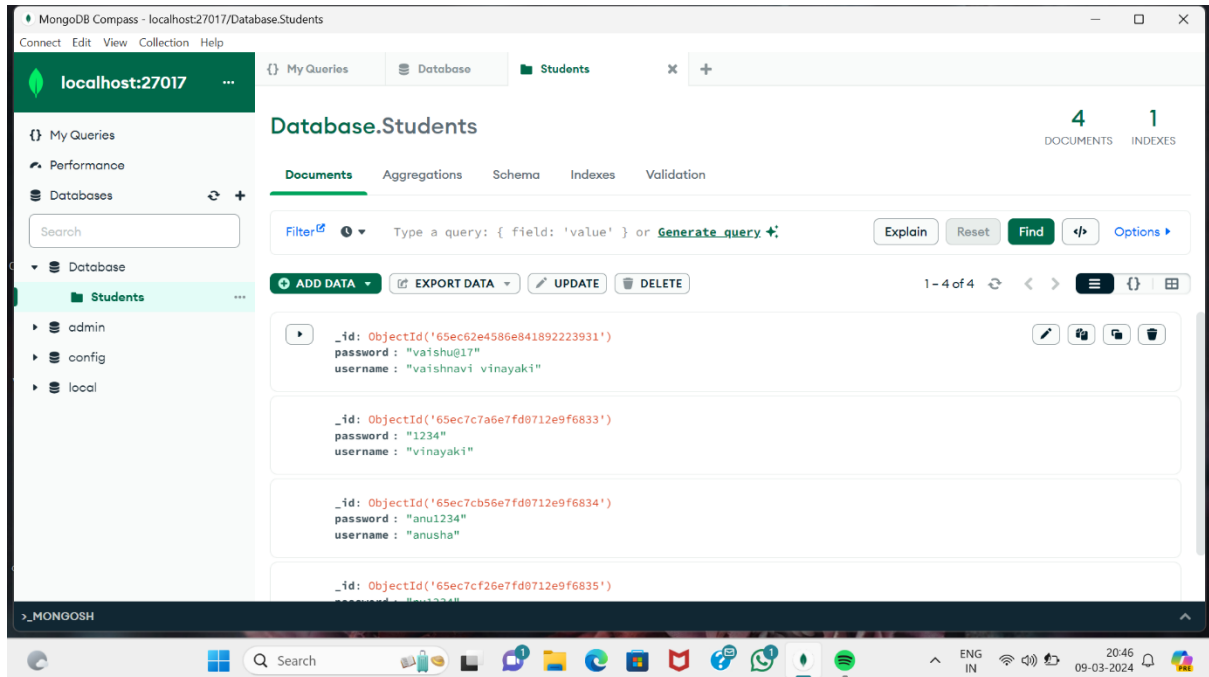

OUTPUT:

API'S OUTPUT by using POST METHOD:

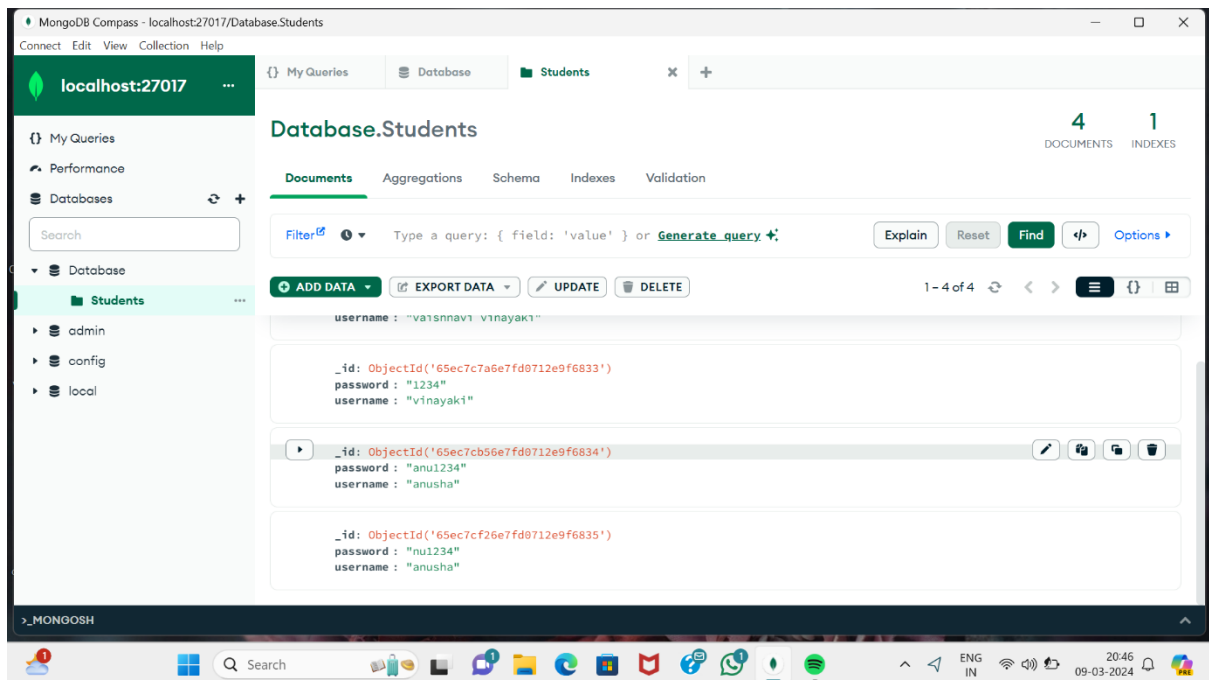

DATABASE CREATION BY USING MONGO DB:

By Adding the data:

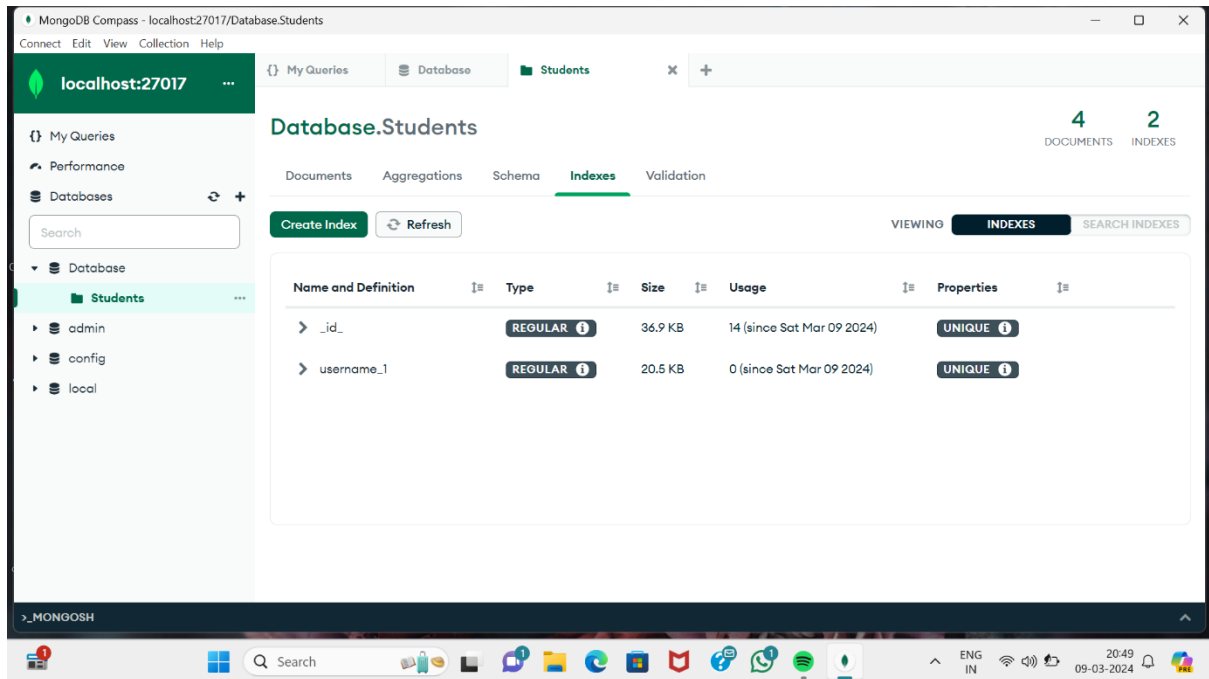

By adding the data into databases:

INDEXES:

If we create or add data into database we use indexes not to allow duplicates by making some conditions on it. In this, we make the username should be unique.

If we give same name while adding the data in the database. It will create an error like shown in the below picture.
